How to find all available symbols at Twelve Data

Using reference data you can find all information about symbols, countries, and exchanges

Written by Team

Updated over 2 months ago

Twelve Data supports a big range of symbols across various instrument types. This reference article explains how to get a list of them and use them for getting the data. All datasets are updated on a daily basis every 3 hours starting from 12 AM:

To find all supported symbols for a specific instrument we will consider different scenarios for equities, forex, crypto and ETFs.

1. Equities

The following request returns all stock tickers supported by Twelve Data:

```
https://api.twelvedata.com/stocks
```

The request will return a set of stocks that includes the following parameters that can be used in the API calls.

```
{
  "symbol": "AAPL",
  "name": "Apple Inc",
  "currency": "USD",
  "exchange": "NASDAQ",
  "country": "United States",
  "type": "Common Stock"
}
```

The following parameters can be used to filter out certain equities(s).

Parameter	Details
symbol	Filter by symbol
exchange	Filter by exchange name or mic code
country	Filter by country name or alpha code
type	Filter by instrument type
format	Value can be CSV or JSON

2. Forex

To list out all physical pairs supported by Twelve Data, you can run the following request:

```
https://api.twelvedata.com/forex_pairs
```

The request will return a set of objects which includes parameters that can be used in the API calls.

```
{
  "symbol": "EUR/USD",
  "currency_group": "Major",
  "currency_base": "Euro",
```

```
"currency_quote": "US Dollar"
}
```

The following parameters can be used to filter out certain pairs.

Parameter	Details
symbol	Filter by symbol
currency_base	Filter by currency base
currency_quote	Filter by currency quote
format	Value can be CSV or JSON

3. Crypto

The request below lists out all digital pairs supported by Twelve Data:

```
https://api.twelvedata.com/cryptocurrencies
```

The request will return a set of objects which includes parameters that can be used in the API calls.

```
{
  "symbol": "ETH/BTC",
  "available_exchanges": [
    "Coinbene",
    "IDCM",
    "Poloniex",
    "TOKOK"
  ],
  "currency_base": "Ethereum",
  "currency_quote": "Bitcoin"
}
```

The following parameters can be used to filter out certain cryptocurrencies.

Parameter	Details
symbol	Filter by symbol
exchange	Filter by exchange name
currency_base	Filter by currency base
currency_quote	Filter by currency quote
format	Value can be CSV or JSON

4. ETF

Supported ETF symbol tickers can be extracted using the following request:

```
https://api.twelvedata.com/etf
```

The request will return a set of symbols for ETF which includes the following parameters that can be used in the API calls.

```
{  
  "symbol": "QQQ",  
  "name": "Invesco QQQ Trust",  
  "currency": "USD",  
  "exchange": "NASDAQ"  
}
```

The following parameters can be used to filter out certain ETFs.

Parameter	Details
symbol	Filter by symbol
format	Value can be CSV or JSON

5. Commodities

The URL request below lists all available commodities:

```
https://api.twelvedata.com/commodities
```

The following array of data will be returned (an example from the data set provided below):

```
{  
  "symbol": "XAG/AUD",  
  "name": "Silver Spot",  
  "category": "Precious Metal",  
  "description": ""  
}
```

The following parameters can be used to filter out commodities

Parameter	Details
symbol	Filter by symbol
category	Filter by category of commodity
format	Value can be CSV or JSON
